

## SUCCESS STORY

### PARKING LOT OF AN OFFICE BUILDING

The property managers of this office building in Ottawa wanted to improve the lighting of their parking lot, as the level of light was really low, especially during winter nights.

STANDARD recommended that they change the old metal halide Wall Packs, substituting their LED counterparts. The new luminaires instantly light up the parking lot, without a warm-up or restrike period, thus allowing building employees to feel safer when returning to their cars at the end of the day.

STANDARD also suggested adding an LED security light above the main entrance of the building. These security lights are equipped with a motion sensor as well as an integrated photocell that allow you to power the lights to turn ON when motion is detected during the day or at night.

*"Now, we know that we have less risk of slipping on ice, because we can see where we're going," says an employee.*

*At STANDARD, we give 100% every day; our dedication and performance make the difference.*
