

Programmable Tri-Level Ceiling

Save energy & money with Stanpro's programmable tri-level ceiling luminaire!

This programmable LED ceiling luminaire offers vast energy savings thanks to its ability to control the light levels and consumption. This is an ideal solution for property managers and businesses requiring continuous lighting, 7 days a week, who want to reduce their energy consumption and maximize their savings. Avoid wasting energy in areas such as hallways & stairwells by intelligently managing illumination levels!

This luminaire can detect:

The occupation of a space

Light turns on/off automatically as soon as a presence is detected or set the luminaire to dim when no presence is detected to reduce consumption and maintain a constant illuminated space.

The light levels of a room

Light brightness is adjusted based on detection of presence or natural light.

Benefits :

Maximize your energy savings by controlling the brightness of a space according to its use.

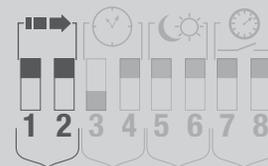

Save intelligently on your electricity bills with programmable luminaires.

How does it work?

This luminaire can be programmed for:

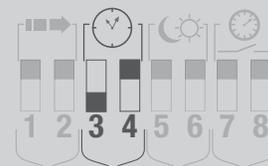

Detection range

Determine the detection area at 100%, 75%, 50% or 25%.

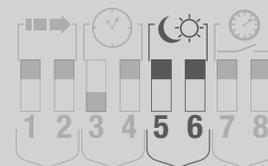

Hold timing

Determine how long the luminaire is at 100% brightness when a presence is detected – 5s / 90s / 3 min / 10min.

Light sensor

Determine the luminaire's brightness adjustments when natural light is detected –
+∞ (Disable) / 50 lux / 15 lux / 5 lux.

Stand-by period

Determine the time where the luminaire light levels are lower before it turns completely off in the long absence of people – 0s / 30s / 10min/ +∞
When set to disable mode, low light is maintained until motion is detected, 10% to 15% of brightness.
