### ■ Dimmable

The new dimmable feature helps create ambient lighting presets to create mood settings and allows for flexibility in usage of space.

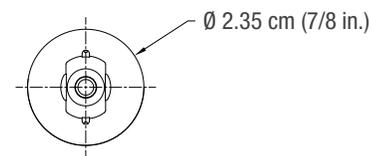

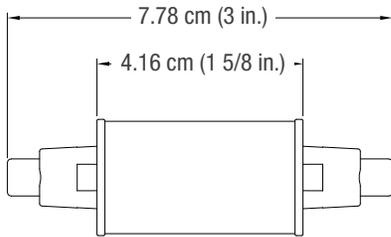

### ■ Additional CCT option

By adding the 4 000 K option to the 78 mm model, we are allowing for a bigger range of applications. Its light is neither too white nor too yellow. This type of white is ideal for rooms that require strong, functional lighting.

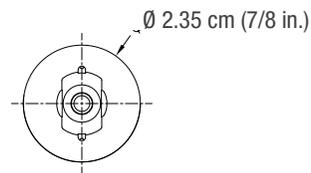

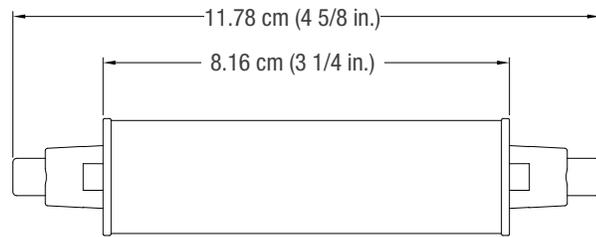

### ■ Higher lumen output

Higher lumens means better efficacy and brighter light! The new T3-R7S has a lumen output 20% higher than the previous generation.
